# Hydraulic products

- Hydraulic fittings
- Hydraulic line tube
- Pipe Clamps
- SAE Flange
- Plastic Spiral Hose
- Textile Hose Protection
- Hydraulic Hose
- Spir Star Ultra High Pressure Hose
- Thermoplastic Hose
- PTFE Smooth And Convolutes Hose
- Flexible Metallic Hose
- Textile Multiple Hose
- Industrial Hose
- Hydraulic Hose Fittings
- Stainless Steel Hose Fittings
- Quick couplers
- Adaptors
- Accessories

Representative in the DRC and neighboring countries for our products

# Services

## Rapid Hydraulic Service

Full-service mobile rapid hydraulics service - contactable at no charge.

## Industrial Assembly

Scheduled activities to avoid unscheduled stoppages

## Technical Consulting

Individual solutions tuned precisely to the needs of our customers

## Workshop Containers

Mobile workshop containers for extreme application areas

## Plant-in-Plant production

Production facility at the customer's site - perfect synchronisation, rapid response times

## Customer training

Wide-ranging seminar programme on all aspects fluid technology, also conducted at customer's site

**HANSA/FLEX**

Representative in the DRC and authorized to sell our products

# Precise solutions for mobile and stationary hydraulics

From press nipples to industrial hose - at LE STANDARDS you will find the right product for you. In addition to standards such as high-pressure and low-pressure hoses, you will also find products for more specific requirements and projects. Our product portfolio includes items for hydraulics, pneumatics, filtration, sealing technology, measurement technology and much more.

Discover the extensive product range or let us advise you. Our experienced employees are always there for you and answer your questions. You know what you need?

## The Perfect Hydraulic Hose Line for Every Application.

Hydraulic hose lines act as links to ensure the transmission of energy in hydraulic systems. If they fail, the entire system is affected and machine failures are the result. The use of high-quality hydraulic hoses prevents such failures and the resulting expensive machine damage. In short: Investments in high-quality hose material pay off.

From mobile applications in the construction industry to stationary hydraulic systems in the food industry, we cover all challenges with our wide range of hydraulic hoses for low, medium and high pressures. A variety of designs such as braided hoses, spiral hoses, textile hoses and plastic hoses (thermoplastic) ensure that you always find the right hose for your application.

Good to know: For special applications we also offer our hose fittings in other materials such as stainless steel. If you cannot find the right one for your application in our standard range, we will be happy to find special components according to your specifications. Simply contact us.

Hydraulic Hoses

Industrial Hoses

Metal Hoses

Hydraulic hose lines are the links in every hydraulic system and ensure the transmission of power. A failure due to defective hose lines often leads to costly machine damage and downtime. Investing in high-quality and durable hose lines is therefore always worthwhile.

Our Industrial hose impress with their maximum reliability and safety. They are often used in the construction and food industries to transport chemicals, food, air, water or abrasive media.

We offer a wide range of different metal hoses, including various types of coiled hoses, which are characterised by special tensile strength and tear resistance, and corrugated hoses, which withstand high pressures and have a very high leak tightness. Metal hoses are characterised by their high resistance to aggressive media and extreme temperatures.
